## QA Engineer | Manual & Automation (Python, Selenium, Playwright) | Multidisciplinary Systems

QA Engineer with 9 years of experience spanning web, mobile, backend, and API testing. Hands-on experience building and executing automation frameworks using Python and Selenium, with active upskilling in Playwright. Strong background in end-to-end testing of complex systems, deep backend validation using advanced SQL, and working in Agile environments to ensure product stability. Experienced working as a sole QA, leading QA strategies from scratch. Efficiently leverages AI coding assistants (GitHub Copilot, Gemini) to optimize testing workflows, accelerate script writing, and analyze system logs.

---

### Experience

#### QA Engineer (Sole QA / QA Owner) at Eyeclick, 2024 – 2026

- **QA Ownership:** Managed and executed the entire E2E testing lifecycle as a sole QA engineer across multiple product lines, collaborating directly with R&D and Product teams to ensure product stability from design to release.
- **Test Design:** Architected and maintained comprehensive test plans and test suites (STP, STD, STR) using Azure DevOps, aligning QA processes with Agile/Scrum methodologies.
- **HW/SW Integration:** Conducted extensive hardware-software integration testing on Android-based interactive projectors across various device models, validating complex UI behavior and gesture-based interactions.
- **Computer Vision Validation:** Tested and debugged camera detection algorithms and computer vision features to ensure sensor accuracy and optimal camera performance.
- **Automation Engineering:** Built and maintained functional automated test suites from scratch using Python & Selenium, expanding regression test coverage and optimizing release cycles.
- **Gaming Lifecycle:** Managed continuous testing for a large, diverse library of interactive games, focusing on functional verification, performance bottlenecks, and accessibility.
- **AI Integration:** Maintained high productivity by utilizing generative AI tools (GitHub Copilot) daily to accelerate automation script writing, generate SQL queries, and troubleshoot platform behaviors.

#### QA Engineer at Iron-Source (Unity), 2023 – 2024

- **Android System Testing:** Tested highly sensitive pre-installed Android applications at the system level, focusing on the complex OOB (Out of the Box) user lifecycle.
- **User Flow Validation:** Verified end-to-end activation flows, monitoring both primary setups and background notification-driven triggers.
- **Firmware Updates (OTA):** Conducted compatibility and regression testing during OTA firmware deployment, ensuring data persistence, system stability, and zero launch delays post-reboot.
- **Deep Diagnostics:** Utilized advanced ADB shell commands for log extraction, system state manipulation, and root-cause analysis across multiple Android device profiles.
- **Defect Management:** Owned the bug lifecycle from detection to verification using Jira, collaborating closely with development teams.

## **QA Engineer at FeatureSpace, 2021 – 2023**

- **API & Backend Testing:** Executed manual testing for web applications and backend APIs using Postman and Swagger, validating JSON/XML responses during early development stages.
- **Automation & Logs:** Designed and executed automated tests using Virtuoso, and performed server-side log analysis using Linux commands.
- **Defect Tracking:** Managed defects and test processes using YouTrack (ALM).
- **Agile Delivery:** Worked in Agile/Scrum environments to support continuous delivery.

## **QA Engineer at NGSOFT, 2018– 2021**

- **Cross-Platform Verification:** Executed manual testing across web platforms (PC, Mac, Mobile) and Microsoft CRM 365, performing integration testing for high-security projects (Ministry of Defense).
- **Test Maintenance:** Created and maintained test cases and bug lifecycles using Jira & TFS.
- **Advanced SQL & DWH:** Utilized SQL for complex database querying (advanced queries, JOINS, and data validation) across interconnected systems, ensuring data integrity and validating DWH components.

## **Education**

### **2026 QA Automation Course at Gal Matalon**

Developing and scripting automation suites using Python, Selenium WebDriver, and Playwright

### **2017 – 2018 QA Automation Course at Yoni Flenner**

Automation of Web & Mobile applications using Java language on Selenium and Appium

### **2016 – 2017 Ness College**

QA Software Testing Course

## **Technical Skills**

### **Automation & Scripting:**

Python, Selenium WebDriver, Playwright (upskilling), Java, Appium, POM (Page Object Model).

### **Testing Methodologies:**

System Testing, HW/SW Integration, E2E Testing, API Testing (Postman, Swagger), DWH & Backend validation, Regression, Test Design (STP/STD/STR).

### **Tools & Technologies:**

SQL (Advanced Queries, JOINS), Azure DevOps, Jira, YouTrack, TFS, DevTools, ADB Shell, Linux (Log Analysis), Git.

### **AI Productivity:**

Continuous practical use of AI Tools (GitHub Copilot, ChatGPT, Gemini) for code optimization, SQL generation, and test scenario creation.

---

## **Languages**

**Hebrew:** Native language | **English:** High level
